

Toronto Functional Medicine Centre Highlights IV Therapy Nutrients for Stress Management

January 15, 2026

TORONTO, ON - January 15, 2026 -

Toronto Functional Medicine Centre has published educational information about six key nutrients that may help support the body during periods of stress when delivered through intravenous therapy. The centre's recent blog post explores how specific nutrients administered via IV drip may help individuals manage stress-related symptoms and support overall wellness.

The educational resource identifies amino acids, B vitamins, glutathione, magnesium, NAD (nicotinamide adenine dinucleotide), and vitamin C as nutrients that may play a role in the body's stress response when delivered intravenously. The centre notes that while oral supplementation remains valuable, IV administration allows for direct delivery of nutrients into the bloodstream, bypassing the digestive system.

The centre's approach to Toronto IV Therapy involves personalized assessments to determine which nutrients may be appropriate for each individual. The facility employs naturopathic doctors, nurse practitioners, and registered nurses who monitor IV therapy sessions and develop customized protocols

based on lab testing and individual health histories.

Amino acids, the building blocks of proteins, may help support neurotransmitter production that influences mood regulation. B vitamins play various roles in energy metabolism and nervous system function. Glutathione, often referred to as the body's master antioxidant, may help protect cells from oxidative stress. Magnesium supports numerous enzymatic reactions and may help with muscle relaxation and nervous system regulation.

NAD, a coenzyme found in all living cells, plays a role in cellular energy production and may support cognitive function. Vitamin C, beyond its role in immune function, may help support adrenal gland function during periods of stress.

The centre emphasizes that Toronto IV Therapy Nutrients for Liver Support and other IV protocols should be considered as part of a comprehensive approach to wellness that may include lifestyle modifications, proper sleep hygiene, regular exercise, and other supportive therapies. The facility also offers complementary services such as acupuncture, integrative functional medicine consultations, and bio-identical hormone treatments.

Toronto Functional Medicine Centre operates from its Yorkville location, offering various integrative health services focused on addressing root causes of health concerns. The centre's practitioners take a whole-body approach to wellness, emphasizing the interconnection between gut health, brain health, and hormonal balance. Their services include naturopathic medicine, detoxification protocols, lab testing services, and pain management therapies alongside their IV therapy offerings.

The centre provides educational resources about functional medicine approaches to various health conditions while emphasizing that all treatments should be undertaken with proper medical supervision and that individual results may vary. Visit the Toronto IV Therapy lounge website, or call us at (416) 968-6961, or email us at info@tfm.care.
